

Coal-to-liquid fuels are clean.

Don't be misled by NRDC.

Get the real facts:

- CTL fuels will be as clean as, or cleaner than, the fuels they replace for emissions of carbon dioxide.
- CTL fuels also will emit dramatically reduced amounts of regulated pollutants.

We're the people who will produce the coal, build the plants and use CTL fuel, and we want you to know the facts. Clearly, NRDC didn't read the latest report from the Department of Energy's Idaho National Laboratory. CTL fuels are clean.

Get the facts at www.futurecoalfuels.org.

We're proud to be members of the Coal-to-Liquids Coalition and are dedicated to supporting clean, domestic transportation fuels.
