

# AMERICAN AIR POWER NEEDS AMERICAN CLEAN COAL FUELS.

*America's defense requires our biggest energy resource.*

★ *The U.S. Air Force wants secure domestic coal-to-liquid fuel...to end dependency on fuel from some of the world's most dangerous regions.*

America's abundant reserves of coal—a 240-year supply—can be transformed into ultra-clean liquid transportation fuel.

- Fuel that is secure within our own borders.
- Fuel that is the world's single largest supply of energy.
- Fuel that will generate jobs here at home.

★ *That's why Congress must give long-term fuel contracting authority to the Department of Defense.*

Long-term fuel contracting authority will help jump-start a U.S. domestic coal-to-liquids (CTL) industry that can supply the military and other transportation fuel users with ultra-clean domestically produced fuels—reducing our dependence on foreign energy and providing greater energy security at 30,000 feet and right here on the ground.
